

Normalization

Normalization is a technique often applied as part of data preparation for machine learning. The goal of normalization is to change the values of numeric columns in the dataset to use a common scale, without distorting differences in the ranges of values or losing information

weight

min = 32
 max = 130

#

$$x_i' = \frac{x_i - x_{min}}{x_{max} - x_{min}}$$

Corollary
 $\chi_i = \lambda_i$

$\chi_i = 0$

Case 101
 $x_i = +\max$
